

COMMUNITY UPDATE

Reeves Plains Energy Hub

Backed by  alintaenergy

November 2025

Project update

We're getting ready to start construction on stage one of the Reeves Plains Energy Hub Battery Project. The 250 MW battery will store energy and release it when demand is high, helping take pressure off the grid and improve reliability.

We're currently gearing up for early works to begin later this year. Early works are key to prepare the site and lay the groundwork for the main works during construction.

Onsite activity

What's happened so far?

We've completed the demolition of buildings and internal fences. We're now working to relocate the single-wire transmission line from the middle to the edge of the project site. This relocation will help clear the way for battery construction and future operations.

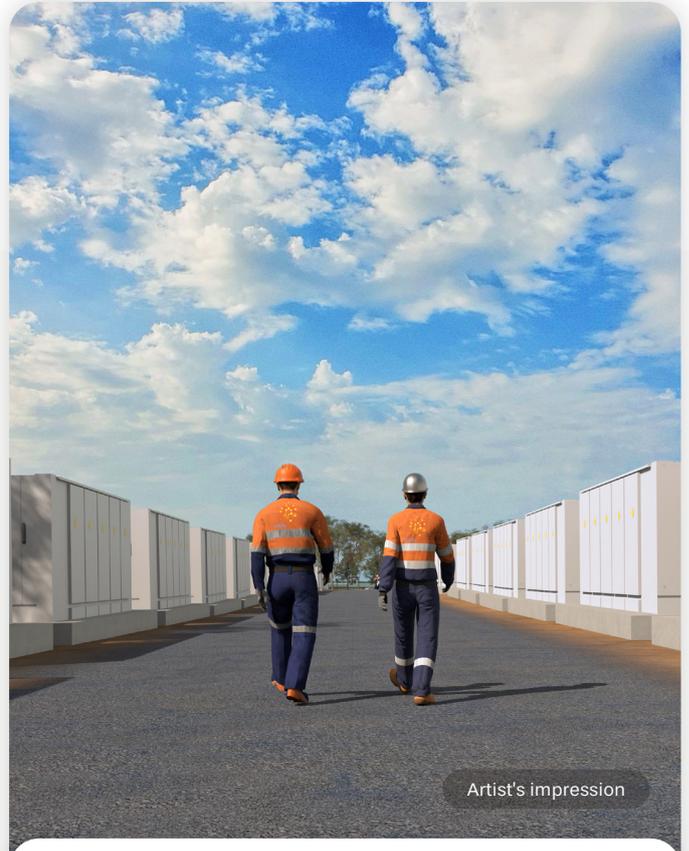

What's coming up?

We've finalised the design of the battery and will share detailed plans and specifications with suppliers. At the same time, we're working through the approvals needed to connect the battery to the electricity grid.

Keep updated

If you have changed any of your contact details or preferences, please send through the updated details to reevesplains@alintaenergy.com.au to ensure you are kept up to date with project news and activities.

Indicative timeline – Battery Project stage one

● CONSTRUCTION

- Early works begin late 2025
- Main works begin early 2026
- The batteries are expected to be delivered in September 2026

● COMMISSIONING

- Targeted for 2027

● OPERATIONAL

Stage 1 operational by 2028 with a 20-year lifespan

Benefit Sharing Program updates

We're putting the final touches on our Community Benefit Program, which will launch in early 2026. This initiative will focus on early funding for local workforce training and capability building, delivering real benefits where they matter most.

To make it easy for community groups to get involved, we're simplifying the process and preparing clear, accessible materials from day one.

We've also launched the Neighbour Program and plan to share further details by the end of the year.

Join our growing team

Join Alinta Energy as a Construction Manager or Construction Supervisor. Lead a groundbreaking energy project, drive innovation, and contribute to Australia's net-zero goals.

Construction Manager -
Adelaide, SA, Australia

Construction Supervisor -
